

AIWA

Design System Reference Guide

A practical visual reference for product designers, video editors, motion designers, engineers, and collaborators.

Canvas
#141212

Surface
#1D1A18

Amber
#F0A94E

Orange
#F2813E

White
#FCFCFC

Source

AIWA exported design tokens: primitives, responsive values, semantic theme tokens, typography, and effect styles.

How to use this guide

Start with the Quick Start page, then use the relevant section for color, type, layout, or motion-production decisions.

Version 1.0 • September 2026

The AIWA visual language

A compact translation of the token system into decisions a collaborator can make quickly.

Dark first The dark theme centers on warm near-black ink surfaces: canvas #141212, surface #1D1A18, elevated #25211D, and cards #322C24.	Warm brand energy Amber and orange carry emphasis. Dark-theme primary actions map to amber #F0A94E and orange #F2813E.
Warm whites, not blue whites Text and neutral surfaces use the ink scale (#FBF9F6 through deep near-black), giving AIWA a warmer visual temperature.	Type has roles Heading: Bricolage Grotesque. Body: Inter. Code: Geist Mono. Preserve these roles across product and motion assets.
Responsive by design Reference widths are 1440 desktop, 768 tablet, and 375 mobile, each with dedicated margins, spacing, radii and type sizes.	Subtle structure Borders and shadows are deliberately quiet. Let hierarchy come from spacing, typography, warm highlights and controlled contrast.

For video & motion

Default composition Use the dark canvas as the safest base. Reserve amber/orange for focal moments, interface actions, energy, rim light, or branded emphasis.	On-screen text Use the heading family for large statements; Inter for explanatory copy. Keep text hierarchy consistent with the supplied responsive scale.
Glow & effects The supplied glow color is rgba(255, 94, 0, 1). Use it as an accent effect, not as the dominant page/background color.	Important limitation The uploaded sources do not define logo lockups, mascot geometry, photography direction, animation curves, transition timing, or audio rules. Those should come from separate approved assets/specs.

Core palette

These are source colors. Semantic usage is defined later by the Dark and Light theme maps.

hero #FCFCFC	hero	rgba(252, 252, 252, 0.8)

Line

default #1C140F	default	rgba(28, 20, 15, 0.12)
subtle #1C140F	subtle	rgba(28, 20, 15, 0.06)
strong #1C140F	strong	rgba(28, 20, 15, 0.18)

Type system

Three font families define role: expressive headings, neutral body copy, and technical/code content.

Role	Family	Use
Heading	Bricolage Grotesque	Hero lines, major statements, section titles
Body	Inter	UI, captions, explanatory copy, supporting text
Code	Geist Mono	Code, technical labels, token values

Desktop type scale

Token	Size	Intended use
text-xs	12 px	Captions, tags
text-sm	14 px	Secondary text
text-base	16 px	Body copy
text-lg	18 px	Subheadings
text-xl	20 px	Card headers
text-2xl	24 px	Section titles
text-3xl	30 px	Hero subtitles
text-4xl	36 px	Hero headers
text-5xl	48 px	Display titles
text-6xl	60 px	Hero / major banners
text-7xl	72 px	Hero / major banners
text-8xl	96 px	Hero / major banners
text-9xl	128 px	Hero / major banners

Weights available in the token source: Light, Regular, Medium, Semi-bold, Bold, Black.

Desktop, tablet & mobile

Reference layout values are mode-specific. Do not scale desktop values proportionally and assume they match the system.

Mode	Width	Margin	Columns	Gutter	Row height
Desktop	1440 px	80 px	12	20 px	64 px
Tablet	768 px	32 px	12	4 px	48 px
Mobile	375 px	24 px	6	4 px	40 px

Type scale by mode

Token	Desktop	Tablet	Mobile
text-xs	12 px	11 px	10 px
text-sm	14 px	13 px	12 px
text-base	16 px	15 px	14 px
text-lg	18 px	16 px	15 px
text-xl	20 px	18 px	16 px
text-2xl	24 px	20 px	18 px
text-3xl	30 px	24 px	20 px
text-4xl	36 px	28 px	24 px
text-5xl	48 px	36 px	30 px
text-6xl	60 px	48 px	36 px
text-7xl	72 px	48 px	56 px
text-8xl	96 px	84 px	72 px
text-9xl	128 px	112 px	96 px

Spacing, radius, border & icons

These scales give UI and branded layouts their rhythm. Use the nearest defined token rather than introducing arbitrary values.

Desktop

Spacing (px) 0, 4, 8, 12, 16, 20, 24, 32, 40, 48, 56, 80, 96	Radius (px) 0, 4, 8, 12, 16, 99999
Border widths (px) 0, 1, 2, 4	Icon sizes (px) xs: 12, sm: 16, base: 20, lg: 24, xl: 32

Tablet

Spacing (px) 0, 4, 6, 10, 14, 16, 20, 28, 32, 40, 48, 56, 80	Radius (px) 0, 3, 6, 10, 14, 99999
Border widths (px) 0, 1, 2, 3	Icon sizes (px) xs: 12, sm: 16, base: 20, lg: 24, xl: 32

Mobile

Spacing (px) 0, 2, 4, 6, 8, 10, 12, 16, 20, 24, 32, 40, 48	Radius (px) 0, 2, 4, 8, 12, 99999
Border widths (px) 0, 1, 1.5, 2	Icon sizes (px) xs: 10, sm: 12, base: 16, lg: 18, xl: 24

Note: The source scale includes a “round” primitive at 999 and full radius tokens at 99999 for responsive modes.

Shadows, glow & glass

Effects should stay subordinate to content. The system uses restrained shadows and warm brand glow rather than heavy neon styling.

Effect	Definition
shadow-xs	0 1 2 rgba(10,13,18,.05)
shadow-sm	0 1 2 rgba(10,13,18,.06), 0 1 3 rgba(10,13,18,.10)
shadow-md	0 4 8 rgba(10,13,18,.10), 0 2 4 rgba(10,13,18,.06)
shadow-lg	0 4 6 rgba(10,13,18,.03), 0 12 16 rgba(10,13,18,.08)
shadow-xl	0 8 8 rgba(10,13,18,.03), 0 20 24 rgba(10,13,18,.08)
shadow-2xl	0 24 48 rgba(10,13,18,.08)
shadow-3xl	0 32 64 rgba(10,13,18,.18), 0 2 8 rgba(10,13,18,.05)
action-inner	inset 0 -1 4 rgba(6,5,4,.72)

Brand glow

rgba(255, 94, 0, 1) / #FF5E00. Best treated as a concentrated light source, edge glow, flare, or energy accent.

Emergent brand background

rgba(170, 54, 20, 1) / #AA3614. Use only where the composition needs a warmer brand field; the core UI canvas remains much darker.

Glass elevated

inset 0 2 4 rgba(255,255,255,.10). Use sparingly to imply depth without breaking the dark material language.

Undefined tokens

Several background blur / glass entries are present but have no numeric values in the supplied export. Do not invent blur strengths from this document.

Production guidance

The following guidance translates the supplied static tokens into motion practice. It is an application layer, not an exported token specification.

1. Establish the dark field

Start sequences on canvas #141212 or surface #1D1A18. This keeps product captures, UI cards, typography and the orange/amber brand spectrum readable.

2. Give brand color a job

Amber/orange should identify the focal action, reveal, progress, energy source, cursor state or key transition. Avoid coating every object in orange.

3. Preserve warm neutral contrast

Prefer AIWA's warm ink whites and muted neutrals over cool blue-grey UI colors. This is one of the palette's strongest personality cues.

4. Use typography as pacing

Large Bricolage statements can carry chapter beats; Inter should handle explanatory subtitles/captions; Geist Mono is appropriate for technical moments or code.

5. Build hierarchy before effects

Use scale, spacing and semantic surfaces first. Add glow or glass only after the composition works without them.

6. Export safely

For social/video compositions, keep critical copy and brand UI within platform-safe margins. The design-system breakpoints are product references, not social-video safe-zone specifications.

Not specified in uploaded sources: logo clear space, mascot rules, photography art direction, animation easing, duration, frame rate, safe areas, subtitle rules, music/sound design, or platform-specific export settings.

Keep it recognizably AIWA

A fast checklist for collaborators before handing work back to the product or brand team.

DO Use semantic theme colors when the output is UI-adjacent.	DO Keep the near-black background warm and low-noise.
DO Reserve orange/amber for emphasis and brand energy.	DO Keep Bricolage for display/heading roles and Inter for readable support copy.
DO Use defined spacing/radius values as the basis for cards and UI reconstructions.	DO Ask for approved logo/mascot assets instead of rebuilding them from this token guide.
DON'T Replace the warm ink neutrals with generic blue-grey palettes.	DON'T Treat the glow color as the default full-screen background.
DON'T Invent blur values for tokens whose values were blank in the export.	DON'T Assume desktop typography simply scales down proportionally to tablet/mobile.
DON'T Use raw primitives where a semantic token clearly communicates the intended role.	DON'T Infer logo, mascot, photography, or animation rules that are not contained in the supplied source files.

Reference values

A compact lookup for frequently used values. The original export remains the source of truth for implementation.
